FASTER PERFORMANCE

Deliver greater customer satisfaction and get more sales through improved site performance with PEER 1's **Content Delivery Network (CDN)**, powered by our unique RapidEdge technology. The CDN lets you accelerate applications and distribute media and software faster with **zero capital cost** to you. We can have you up and running on the CDN within minutes without ever moving your origin server or touching your web site.

GREATER REACH

Your content is cached on servers spread over **17 cities and 2 continents worldwide** to ensure it is available in closer geographic proximity to your customers. Your customers will experience greater overall site performance and seamless usability which translates to more sales opportunities and greater market share for your business. Using the CDN also helps you mitigate nasty DDoS attacks.

HOW IT WORKS

The CDN is a caching system that directs your customers to the nearest caching server (or node). As the customer accesses your web site, they retrieve content from the node instead of the origin server, reducing the load on that server and allowing for much faster delivery of the content. With **On-demand Propagation**, content from your origin site is instantly pushed out to each caching server only when it is being requested from a specific geographic location. This results in increased performance and cost savings. Our online **CDN Control Panel** provides you with real-time information and easy-to-use tools for monitoring, distributing, and managing your content.

30-DAY FREE TEST FLIGHT

For a limited time, we are offering a 30-day¹ FREE test flight of the CDN and a **10% discount** after your test flight is up.
