

Managed Firewalls

Protect yourself from malicious traffic before it ever touches your server.

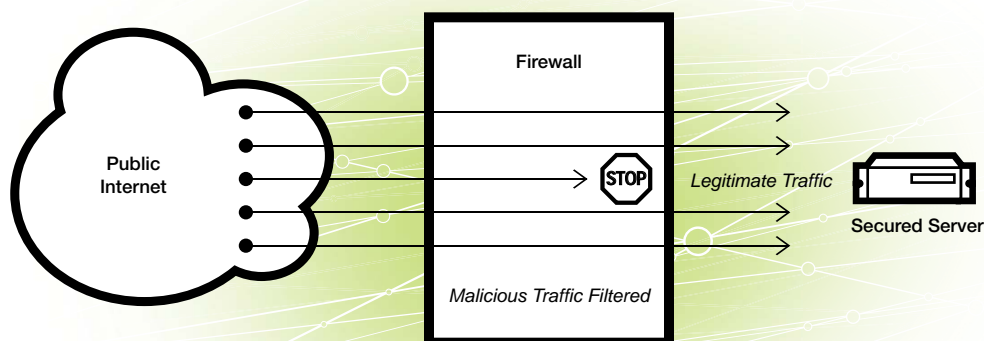

Hackers, script-kiddies, and other unscrupulous characters have forced all of us to vigilantly protect our networks. PEER 1 Hosting is there with the latest technology to keep your websites and applications safe and secure. Using world-class **Juniper™ Firewalls** and a highly-trained security force to manage them, we can help make sure that the only legitimate traffic is allowed through.

Our security force manages your dedicated Firewall and monitors our FastFiber Network™ around-the-clock to make sure you can sleep at night. We proudly offer Juniper Firewalls along with their reputation in delivering consistent and reliable best-in-breed performance. Combine this with PEER 1 Hosting's award-winning managed services, you're getting the absolute best Managed Firewalls in the industry.

HOW DOES IT WORK?

Your Firewall sits between your server and all incoming traffic. Based on a set of rules that is crafted by our security engineers and customized to your hosting solution, traffic is either allowed through or turned back. This process is completely invisible to your legitimate customers and yet, keeps the bad guys from intruding.

As well, your Managed Firewall is dedicated to your use, so there's no chance of you being compromised by another customer. You'll also enjoy features like site-to-site and client-to-site VPN so you can connect to your dedicated server securely from your office.

FEATURES

- Source/Destination-based IP/port filtering**
Lets the traffic you want through while silently rejecting the rest.
- Port Scan protection**
Detect and block malicious scans of your network and shut down attacks before they can start.
- ICMP/UDP/SYN flood protection**
Even legitimate-looking traffic can be used as a weapon when there's too much of it. Juniper identifies and throttles these to keep your real customer traffic coming in.
- IP address spoofing**
Hackers can try to hide their true origin by claiming to be part of your trusted network. With Juniper Firewalls, these impostors get the brush-off.
- Malformed packet protection**
Like the X-ray scanner at the airport, your firewall will look inside every packet to make sure that everything is in order before it goes through.

WHY DO I WANT A FIREWALL?

You don't want a Firewall – you need one. Besides the obvious reasons for providing a secure perimeter for your private data, there are many other reasons to get a Firewall. Running a business on your site? If your server gets compromised and is then used as part of a further attack, your company can be held liable. Is your company PCI or HIPAA certified? Firewalls are now a standard part of the requirements for these and many other compliance standards. Concerned about server performance? By removing the onus of handling and filtering malicious traffic from your server, a firewall can help boost your server performance. Firewalls are no longer a comfort – they are a necessity.

Value Firewalls	Performance Firewalls	Custom Firewalls
 Up to 100 Mbps	 Up to 350 Mbps	 Up to 2.0 Gbps
LOWER PRICE		BETTER PERFORMANCE
Juniper Netscreen-25 <i>16,000 Concurrent Sessions</i>	Juniper SSG 5 <i>4,000 Concurrent Sessions</i> <i>2,800 New Sessions/Second</i>	Juniper SSG Series
